A REPORT

On

“Seroprofiling Camp for Underprivileged kids”

Social Outreach Cell, Dr. Ambedkar College, Deekshabhoomi, Nagpur

Anaemia is highly prevalent globally, disproportionately affecting children and women of reproductive age. Anaemia is associated with poor cognitive and motor development, and work capacity. Among pregnant women, iron deficiency anaemia is also associated with adverse reproductive outcomes such as preterm delivery, low-birth-weight infants, and decreased iron stores for the baby, which may lead to impaired development. Iron deficiency is considered the most common cause of anaemia but there are other nutritional and non-nutritional causes. Blood haemoglobin concentration is used to diagnose anaemia and it is affected by many factors, including altitude (metres above sea level), smoking, trimester of pregnancy, age and sex, malnutrition, etc. When blood haemoglobin concentrations are used in combination with other indicators of iron status, they provide information about the severity of iron deficiency. The prevalence of anemia in a population can be used to classify the public health significance of the problem.

Anemia is the most common micronutrient deficiency disorder, is the World’s second largest cause of morbidity, affecting 24.8% of the population, of which 47.4% are under-five children. Although its magnitude has shown to decrease across the regions, it continues to be a significant problem in developing country like India. Accurate and precise measurement of haemoglobin concentration is critical for estimation of population-level anemia prevalence, which forms the basis for defining nutrition policy choices and monitoring programs. It also makes people aware of their health conditions, and it helps them in affording valuable additional data in the diagnosis of certain diseases and conditions.

In order to contribute for the same, Social Outreach Cell of Dr. Ambedkar College Nagpur had organized an activity of ‘Seroprofiling Camp for Underprivileged kids’ in the areas of Nagpur city-Vardaan School House center(NGO), Savitribai phule Nagar and Vardaan School House center(NGO), BabhulKheda, Nagpur at 12 pm respectively for creating awareness about Anaemia on dated 25-02-2023 and 4-03-2023.A total of 101 kids were tested. Out of which 52 were girls and 49 were boys. The coordinator of Social Outreach Cell Mrs. Shweta Paranjape, all the members of the cell- Mr.PradipHirapure, Mrs.Shama Khan, Ms. Swati Chimurkar, Ms.RohiniMeshram all helped in coordinating the entire activity along with Dr. Mahavir R.Mundra and his team, MG pathology Lab, Lane No 5 plot no 3A, opposite Satyam Apartment, Vishwakarma Nagar, Nagpur, Maharashtra 440027.
